Plan Ahead! WK Mechanical wants to help you have less stress in 2023

Your home should be the place you head to relax and unwind after a long day. If your HVAC system is not working properly and you are faced with the possibility of an expensive repair, we imagine you are going to face some stress!

The good news is...we can help!

There are several things that WK Mechanical can help you with to ensure that you move through the year with as little stress (when it comes to your HVAC system) as possible. Here are a few:

Regular Maintenance – The Comfort Club

One of the biggest ways to prepare your home for the future is to make sure your HVAC system is healthy. The best way to keep your system healthy is to have it inspected and maintained annually. We offer an annual maintenance program called the WK Comfort Club to help you do just that! It's available for a variety of systems including Air Conditioning, Gas & Oil Heating Systems, Ductless Systems, Water Heaters and more! Look at our website to learn more. <https://wkmechanical.com/maintenance-agreement/>

Never Be Without Power – Generators

A power outage whether caused by a storm or another emergency can be more than an inconvenience. One way to prepare your home for the future is to install an automatic standby generator for some added peace of mind. There are many factors to consider when it comes to installing a generator, so it makes sense to consult the help of a knowledgeable technician. WK can help you determine the generator you need, how much your home's electrical system will be able to handle, as well as how much of your home you would like the generator to power. Take a look at our website to learn more. <https://wkmechanical.com/generators/>

Take Advantage Of Rebates While Gaining Year Round Comfort – Heat Pumps

New York State has a Clean Heat initiative that encourages New Yorkers to convert from fossil fuels to clean energy by heating and cooling their homes with a heat pump. Rebates are available and you can receive up to \$14,000, we'll even help you with the paperwork. Just in case you aren't aware of what a heat pump does, a heat pump is a single unit that is installed outside your home and will act as both a heater and an air conditioner. It draws heat from the air and during the winter it moves the energy indoors to heat and during the summer, it moves the energy outdoors to cool. Find out more on our website at the following link.

Do It The Right Way With WK - In Home Consultations

If you aren't sure what solutions are best for your particular situation, consider having an In-Home Comfort Consultation. We will ensure your HVAC system is well suited for your home's comfort needs. The professionals at WK will thoroughly analyze your home using the best tools in the business including free on-site water testing, measuring your home to perform a computer load calculation for correctly sizing your heating and cooling systems and pinpointing any other areas to help you improve the overall comfort of your home! Find out more on our website, here. <https://wkmechanical.com/free-in-home-comfort-consultation/>

Brrrr! It's Cold Out There. Tips To Help You Keep Your Heating Costs Down

Everyone is feeling the pinch of rising costs especially when it comes to your home heating costs. According to an article in Time Magazine two thirds of all American's paid more to heat their home in 2022 than they did the year before. With the cost of oil up by as much as 65% and the cost of natural gas up by as much as 32% across New York State, increases in the cost of propane are approximately 15%.

We understand and are here to help in any way we can! If you are dealing with an unexpected need to replace your heating system, know that we have financing available to help so you can make sure your home has heat without having to *stress about the cost*.

It may be time to entertain the conversation about making a big change to a more energy-efficient solution. One that takes you away from fossil fuels altogether. Consider upgrading to a heat pump. With the amazing rebates available, you could be eligible to receive up to \$14,000 back! For more information on Heat Pumps, head to our website:

<https://wkmechanical.com/heat-pump-services/>

We've got a few money-saving tips:

- When the sun is out, open the shades, blinds & windows! Sunlight really can help to warm up a room so take advantage of any natural light you can.
- Lower your thermostat at night. Dial down your thermostat at night when everyone is headed to bed and will be snuggled up under the covers.
- Do what you can to be vigilant about drafts. Doors that let in drafts can be an issue as well as windows with old, cracked, or peeling caulking.

The most important advice we can offer you is to make sure you keep your heating system maintained on a regular basis! Regular maintenance is important because when your heating system is well maintained and in proper working order, it can save you money. WK Mechanical makes regular maintenance easier with our annual maintenance program that helps you to make sure your HVAC system is always in top working condition. To find out more about The WK Comfort Club head to our website.
