Get Your Home Ready for Spring With These Tips From WK!

As we turn the corner into March, it's the perfect time to begin thinking about Spring cleaning and preparing your home for the new season ahead. As you begin making your plans, be sure that part of that preparation includes your HVAC system. It can be easy to slip into Spring, turn your heat off and assume that everything will be working fine when those hot months finally arrive. Unfortunately, that is not always the case. Spring is a **GREAT time to prep your Air Conditioning system so that any issues can** be addressed prior to the arrival of warmer temperatures.

To Get Your HVAC System Ready You Can:

1. **Change Your Air Filters** - Changing air filters is recommended for 90 days for the health and longevity of your HVAC system. Use the change in seasons as a prompt to make sure your air filters are replaced.
2. **Test Your Air Conditioning** - While you may not need it, now is a good time, to give your Air Conditioning a test run. Pay attention to its effectiveness and note any strange noises or odors. Should any of those occur, give us a call!
3. **Clean Up Debris Around Your Outdoor Unit** - Clean up any debris that has collected near your outdoor AC unit and its coils. Leaves and debris can easily get inside your unit and cause problems.

4. Schedule HVAC Maintenance – If you are not already a part of the [WK Comfort Club](#), you might want to give us a call and schedule a maintenance visit. We will clean your unit and let you know if there is anything that is in need of repair. This is another way to stay ahead of small problems and keep your HVAC system running in peak condition!

The WK Comfort Club is an annual maintenance program that offers annual maintenance on a variety of systems (AC, Heat Pumps, Gas & Oil Heating, Water Heaters, Water Treatment Systems, Humidifiers and Air Purification Systems) as well as discounts & warranties on repairs, priority scheduling and discounted diagnostic charges.

5. Get A Programmable Thermostat - A programmable thermostat will help you monitor the temperature in your home and can also help you to save money on your utility bills!

6. Take A Closer Look At Your Windows - It's also a great time to check your windows to make sure they are in working order. Open and close them and double-check the weather stripping to ensure it is intact.

7. Give Serious Thought To A System Upgrade – As a New York State Clean Heat Participating Contractor, we have helped customers throughout the Hudson Valley make the transition from fossil fuels to clean energy by upgrading their HVAC system to energy-efficient heat pumps. Heat Pumps work to both heat and cool your home. With the rebates that are currently available from partnering utility companies as well as the federal tax credit that is currently available, it's certainly worth considering.

We care about you and your family's comfort! While it may seem premature to think about turning on your Air Conditioning, an HVAC system that is prepped and ready will save you some stress once summer begins to make it a necessity! If we can be of any assistance, please don't hesitate to give us a call.

When It Comes To Maintenance, Leave It To The Professionals

Everyone wants their family to always remain comfortable but when any component of your HVAC system isn't working properly, especially in extreme temperatures, that is nearly impossible. If you like to tinker around with tools and have a bit of knowledge on how HVAC systems work, you may be tempted to see if you can fix the problem yourself. While it is certainly possible to make a repair on your own, we would encourage you to leave these types of repairs to the professionals!

Why?

Well first, **it's safer**. HVAC systems can be dangerous. It is not worth the risk to your home or yourself should something go wrong. **Our technicians are experienced** and have received specialized training, certifications, and licensing, to ensure that we can do the job professionally and safely.

Second, **enlisting the help of a professional will come with guarantees**. If something goes wrong, utilizing the services of a company like WK Mechanical, means that if something goes wrong during the repair, the company will stand behind their work. Additionally, if your system is still under **warranty**, it is highly likely that there are conditions that require all repairs to be made by a licensed technician.

Finally, a professional brings a valuable resource into **your home so that your questions can be answered**. If you been wondering about an odd noise your system is making, ask! We are easy to talk to and would be happy to answer any of your questions!

Are you ready to get some help with maintaining your HVAC system? The best way to keep your system healthy is to have it inspected annually. An annual maintenance agreement will also likely extend the life of your equipment. We

offer an annual maintenance program called the WK Comfort Club to help you do just that!

We offer comprehensive annual maintenance agreements for the following systems:

- Air Conditioning
- Gas & Oil Heating Systems
- Ductless Systems
- Air Cleaners
- Water Heaters
- Humidifiers
- Water Treatment Systems
- Kohler Home Generators

Signing up for one of our maintenance agreements makes you a member of The WK Comfort Club that offers additional benefits such as:

- Priority Service
- 15% Discount on repairs
- 10% Discount on additional maintenance agreements
- 1 Year parts & labor warranty on all repairs

- Emergency Service at no additional charge
- Discounted diagnostic charge
- Customer assurance pricing
- Inflation protection
- Computerized scheduling
- A fully transferrable agreement
